

CHANGES IN UNION PACIFIC

J. A. Foley Leaves the Road After Four Years of Service.

ABANDON BRANCH OFFICES AT LINCOLN

Through Train Service Will Be Introduced to Southern Nebraska, Obviating Change of Cars at Valley.

Another big change in the operating department of the reorganized Union Pacific railroad will go into effect on Sunday, August 16. Circulars have been issued announcing the retirement of J. A. Foley, for many years superintendent of the Omaha and Republican Valley and the Union Pacific's lines south of Lincoln, Neb.

The operation of all the branch lines in Nebraska is to be somewhat changed. Hereafter the branch lines south of Lincoln will be operated from Omaha and the operating offices at Lincoln will be abandoned. The branch lines north of Grand Island and Kearney are to have their headquarters at North Platte, Neb.

The jurisdiction of W. L. Park, assistant superintendent, is extended over the second district of the road in this state, including the Grand Island station and the Grand Island yard. W. L. Park is also appointed assistant superintendent of the branch lines north of Grand Island and Kearney. He succeeds Harry E. Flavin, transferred a few weeks ago to the city. Park's new headquarters will be at North Platte.

Harry E. Flavin, assistant superintendent here, is given jurisdiction of the lines south of Valley. He will succeed J. A. Foley, "resigned."

Regret is expressed in local railroad circles over the retirement of Mr. Foley. He was one of the oldest attaches of the Union Pacific operating department. It is not known where he will go from here.

In connection with the removal of the operating department of the Omaha & Republican Valley from Lincoln to Omaha, it is announced that commencing on Monday, August 15, through train service over that branch line will be offered to and from Omaha. Heretofore passengers for points on the Omaha & Republican Valley have gone out of here on main line trains and transferred at Valley. On and after Monday next separate trains will be run for the branch south of Valley. The eastbound train will leave Beatrice and Stromsburg at 8 a. m., arrive at Valley at 12:30 p. m. and leave there at 3:30 p. m., and there will be no change or transfer at Valley, the train running right through to Stromsburg and Beatrice.

Railroad Notes and Personal.

J. E. Buckingham, chief clerk of the B. & M. passenger department, has gone to Chicago to spend some time.

William D. Cornish, first vice president of the Union Pacific railroad, is in the city. This is his first visit to Omaha since his election as first vice president.

J. D. M. Hamilton of Topeka, Kan., claims attorney for the Santa Fe system, accompanied by his family, Mrs. Mix and Miss Mix of Chicago, are visiting the exposition.

SIXTH WARDERS LEAD OFF

Lively Rally of the Republican Club at Idlewild Hall to Start the Campaign.

An emphatic endorsement was given to the state ticket at last night's meeting of the Sixth Ward Republican club at Idlewild hall on Twenty-fourth street near Grant. Nelson G. Pratt was urged to become the club's candidate for county attorney. A set of resolutions to this effect was adopted.

Congressman Mercer was one of the speakers of the evening. Speaking of Mr. McKinley Mr. Mercer said:

I have never before seen such enthusiasm all over the country as at present. It presages the sure success of the republican party. No other administration ever went into power under such peculiar circumstances as did that of Mr. McKinley. The country had grown up as a great peace power and was not prepared for war, yet the party solved every problem that confronted it and with such success that the opposition of antagonistic elements has been turned to admiration. In all the tumult attending the preparations for the war Mr. McKinley kept his head and as soon as the country was ready, but not before, the guns were fired. The party has demonstrated that it can do more than protest. Some parties are nothing more than organized kicks. The republican party has shown that it can go into new fields and solve new problems. For this reason it has the confidence of the country and today as never a party had before in the history of the nation.

Speeches were made also by A. W. Jefferson, who is a candidate for county attorney; Mr. Pratt, Dr. W. H. Hanchett and others. "The party that has freed 4,500,000 slaves," said Mr. Pratt, "has brains enough to solve the problem of territorial acquisition." Dr. Hanchett thought Mr. Mercer could easily secure the county attorney position by central committee in this campaign, as he would have no trouble whatever in being returned to congress. Mr. Jefferson was confident of success this year with such leaders as Hayward and Mercer.

President R. B. Carter named the executive committee for the year as follows: I. G. Barlight, A. W. Johnson, J. R. Moore, George S. Collins, George Elliott, Mr. George W. Mc-

STAMP TAX ON THE BANKS

Commissioner Scott Elucidates Another Point of the New Revenue Law.

In answer to L. W. Burlin, cashier of the Colonial National bank in Omaha, Commissioner Scott made the following reply concerning the estimating of the tax levied upon banks by the new revenue law:

The law, section 2, specifically provides that the tax shall be computed upon the capital and that in estimating surplus this office holds that undivided profits shall be included. The law also specifies that the tax shall be computed on the time during the preceding fiscal year, the same may be averaged as was specifically provided by law in the case of capital, under the revenue act of June 30, 1864. It was found necessary in the case of deposits under the act of 1864 to ascertain the average by adding together the amount at the close of business of each business day and dividing the amount by the number of business days. This method should be adopted under the new revenue law, the need of averaging is obviously greater as to individual profits. It is held to be improper to reduce the amount of undivided profits by accrued interest or by profits to be divided.

Competition Causes Trouble.

Sherman Richardson and O. Frederickson, peddlers of peaches, came to blows last night over a price schedule. Richardson called his wares near Sixteenth and Cass streets at 10 o'clock and Frederickson, who is a rival of Richardson, called his wares near Sixteenth and Cass streets at 11 o'clock. Richardson, who is a member of the police force, believed in free competition and defended his view successfully in the encounter which followed. The men are charged with fighting.

Who Knows Humphreys?

Information has been received by the city that E. K. Humphreys of Omaha, a printer, was killed by lightning recently at Miami, Fla., and it is stated that he has a sister residing in Omaha. Any information relating to the case will be received by M. G. Edwards, secretary of the local printers' union, box 794. Reference to city directories shows that "E. K. Humphreys" was employed in the Herald job printing rooms between 1883 and 1885 and boarded at the St. Charles hotel.

Notice A. O. U. W.

All members of Union Pacific lodge No. 27 are requested to meet at their hall this evening at 8 o'clock to make arrangements for Brother J. C. Cornwell's funeral.

By order of W. H. INGLEDEN, Master Workman, D. A. HINDLING, Recorder.

WHAT NORTH CAROLINA SHOWS.

Practical Result of Experimental Farming and Plant Feeding. One of the most interesting exhibits at the exposition is that of the North Carolina State Horticultural society. This exhibit is situated in the Agricultural building. It seems that under the auspices of the North Carolina State Horticultural society, acting in co-operation with the state experiment station, an experimental farm was established about three years ago at Southern Pines, N. C. The managers of the farm are constantly engaged in scientifically experimenting to find out what kinds and amounts of fertilizing materials will produce the largest crops at the least expense.

A LITTLE GIRL'S VISIT TO THE EXPOSITION.

Dear Mr. Editor: I know you are a very busy man, but I thought you might like to know how a little girl enjoyed herself and what she saw and heard at the exposition, so I am going to write and tell you all about it.

One fine morning my friend and I started out for a visit to the exposition. The morning was cool and pleasant and we anticipated a fine day.

After entering the gates we stopped at the government building, where we saw most everything one could expect, such as the fisheries, war departments and government's display, and the guide was so courteous as to explain everything necessary.

After passing through the building we came out upon the east side and stood gazing over the lagoon. It was a beautiful sight, with its green banks, sparkling waters and bright flowers.

One picture shows the yield on plot No. 13, which was not fertilized. The yield was just 220 pounds. Another shows the yield on plot No. 14, which was moderately fertilized; the yield was 1,140 pounds.

Several of the pictures illustrate experiments with tobacco at the experimental farm. One picture shows the yield on plot No. 13, which was not fertilized. The yield was just 220 pounds. Another shows the yield on plot No. 14, which was moderately fertilized; the yield was 1,140 pounds.

Several of the pictures illustrate experiments with tobacco at the experimental farm. One picture shows the yield on plot No. 13, which was not fertilized. The yield was just 220 pounds. Another shows the yield on plot No. 14, which was moderately fertilized; the yield was 1,140 pounds.

Several of the pictures illustrate experiments with tobacco at the experimental farm. One picture shows the yield on plot No. 13, which was not fertilized. The yield was just 220 pounds. Another shows the yield on plot No. 14, which was moderately fertilized; the yield was 1,140 pounds.
